

Quick Service POS

For quick service restaurants, the ability to quickly and efficiently process customer orders is critical to success. Whether a customer is in line or at the drive thru, quick service restaurants require a POS system that can get customers in and out without having to wait in long lines, repeat orders more than once or receive an incorrect order. Customers often decide if service was poor or up-to-par by how quickly they got in and out of the restaurant — so speed and efficiency are essential.

Designed for the quick service industry, the Focus POS system allows restaurants to monitor and reduce service times. Conversational ordering and order confirmation capabilities speed up service by allowing both existing employees and new hires to engage in quick, easy conversations with customers to ensure their orders are completed correctly.

Easily manage multiple revenue centers — the counter and the drive-thru window — on any screen in the store so that both lines are kept moving. Send orders from the POS system to the kitchen printers or kitchen display systems to streamline food production. Keep an eye on your business by running real-time reports to monitor cash shortages, inventory shrinkage, comps and voids.
