

# Should your security system do more?

## 1. POS Integration and Video Surveillance + Ai

- ✓ Using i3's artificial intelligence to track customers can help to ensure that every transaction happening at your till will be accounted for.
- ✓ Occurrences like customers-without-transactions or exceptions-without-customers will be greatly reduced with your i3 security system.

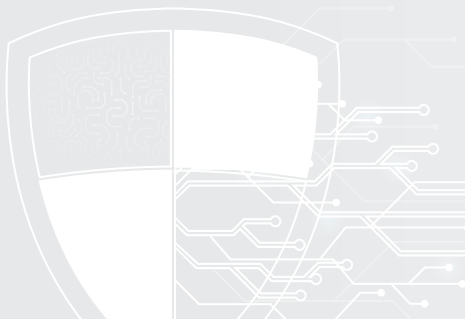

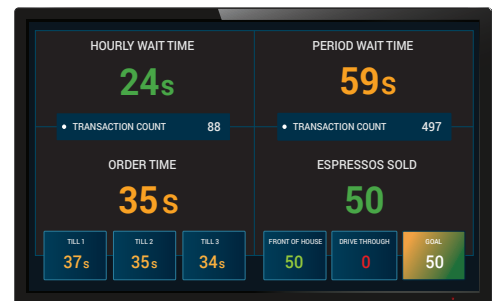

## 2. Monitor and Control your Wait Time

- ✓ When combining Ai with your video system, i3's video system can track the waiting time for your store's customers.
- ✓ Understanding this information allows business to drastically improve their service times within their stores.

## 3. Reach Your Sales Goals

- ✓ By integrating real-time data from your POS machine, i3's software can show how employees' performance is affecting the company's bottom-line.
- ✓ Stores can also leverage the technology to encourage suggestive selling and therefore gain more profitability and visibly move merchandise quicker through the store.

## 4. Secure Cloud Connection

- ✓ Connect remotely and securely to the i3 cloud platform.
- ✓ i3's system and its remote connections are secured and hardened against cyberattacks.
