

Focus

TABLET POS

Tablets are a powerful, revenue boosting tool for restaurants. Focus POS has developed a tablet POS solution that functions as an enhancement or extension of your existing Focus POS system. Versatile in its functionality, a tablet can be used as a traditional, fixed POS terminal, or it can be used for tableside orders, pay-at-the-table, line busting applications, and more!

Focus POS' tablet POS software integrates seamlessly with the Focus POS system. You'll gain all the benefits of a tablet POS solution while retaining all of the functionality of your traditional, stationary point of sale system. Because our tablet POS solution uses the same interface as our traditional point of sale system, you will lose no time or money due to staff training on your new tablet devices, and you will eliminate potential gaps in productivity. Tablet POS will allow you to streamline the ordering process by getting order tickets to the kitchen more quickly, improving order accuracy, and boosting customer satisfaction.

FEATURES
